

insulated
roofing & wall panels

PANEL CONSTRUCTION

Coolaspan specialises in the production of high quality, insulated steel roofing & wall cladding panels.

Our state-of-the-art manufacturing equipment produces a wide range of architecturally inspiring designs and sizes that will provide years of maintenance-free services for commercial and residential building applications.

The combination of extremely durable, coated steel external roofing, high quality insulation and installed modular panels, will greatly enhance your personal comfort and working environment while saving both time and money.

Coolaspan's corrugated roof panels can be supplied in both convex and concave designs, providing a range of unique and innovative options to suit your specific building and architectural applications.

RANGE

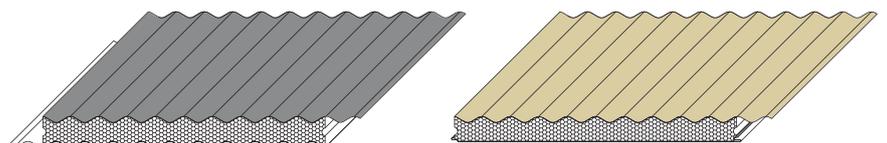

Our panels are available in four attractive designs:

Double Corropanel™ incorporates COLORBOND® corrugated steel finish on both sides - This product can also be supplied curved to suit your specific architectural design requirements.

Corropanel™ combines COLORBOND® corrugated steel finish on one side with continuous COLORBOND® steel ceiling finish on the reverse side.

Monopanel™ combines COLORBOND® steel roofing with continuous COLORBOND® steel ceiling finish on the underside.

Trimspan Panels span up to 9.4 metres in length and are supplied in convenient, easily handled 762mm wide sheets in thicknesses ranging from 50 - 175mm.

PERFORMANCE

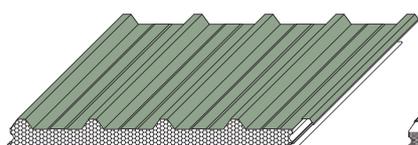

Coolaspan's insulated roofing and wall cladding panels provide maximum insulation across the widest range of architectural design alternatives.

They provide maximum heat protection, even in Australia's harshest outback and tropical climates.

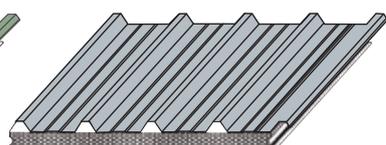

In cooler conditions, Coolaspan's roof and wall panels assist in retaining warmth from winter sunshine, while insulating against heat normally lost through ceilings and conventional building materials.

Coolaspan panels not only create a more comfortable living and working environment; they also reduce heating and cooling costs. Factories, offices, school halls, gymnasiums, sporting complexes, residential projects - all will benefit from considerable savings in construction, heating and cooling costs and on-going maintenance expenses.

Additional benefits include reduced roof noise from rain or hail and reduced noise transmitted through walls and fencing.

STRENGTH

In addition to being among the most thermally efficient metal roofing and wall cladding materials available, Coolaspan's 'three-in-one' panels are also among the strongest, lightest and easiest to install.

Hi-tensile COLORBOND® steel roofing from Bluescope Steel, Australia's largest roofing material manufacturer, is bonded to both surfaces of a solid sheet of high density, solid polystyrene insulation. Our specially developed hi-tech adhesives have proven their strength and outstanding performance under the harshest environmental conditions.

ACCESSORIES

Superior Panels carries an extensive range of accessories to make assembly so much easier and more convenient. Steel Posts, beam supports, wall top plates, end capping, gutterings, weather strips, lighting kits, sealants, primary and secondary fasteners can all be supplied to match selected roofing and wall panel colours.

COLOUR RANGE

Coolaspan's insulated steel panel range is available in the full colour palette from the COLORBOND® range. Standard ceiling colours are either Surmist® or Classic Cream™.

COLORBOND®, colour names and ™ colour names are registered trade marks of Blue Scope Steel Limited. The COLORBOND® steel colours shown are a guide only and may not accurately reflect the true colour. We strongly recommend that colours are checked against a sample of the actual product before orderings.

VERSATILITY

Coolaspan panels do away with the need for rafters and battens, making them ideal for use in broad span outdoor entertaining areas. They are easily cut to suit curved or irregular angled floor plans, while the choice of flat, convex or concave roof or wall surfaces adds to the range of excitingly different design possibilities.

Panels can be supplied cut to length in convenient widths, facilitating faster and easier installation and reducing costs by reducing wastage from off-cuts.

WARRANTY

10 YEAR warranty on all COLORBOND® colours.

SERVICE

When you deal with Coolaspan you'll be dealing with an enthusiastic team of highly qualified and experienced people who take genuine interest in meeting the specific needs of your commercial, industrial or residential building project.

Coolaspan products are manufactured by Superior Panel Construction, one of Australia's leading manufacturers of insulated roofing and wall panels.
